

Professional Brake Bleeder Tool Set

COMPONENTS

1. Filling Bottle
2. Valve
3. Clamping Screw
4. Safety Valve
5. Air Inlet Valve
6. Collecting Container
7. Silencer
8. Drain Valve
9. Bleeding Hose

GENERAL

This professional brake bleeder tool set allows you to easily and conveniently bleed brake and clutch systems and can be operated by one person only. The brake fluid flows directly into the drain canister while bleeding the system which guarantees a clean working space.

SAFETY ADVICE

- Brake systems should be maintained by qualified personnel only!
- Secure your vehicle against unintended movement.
- Always follow the manufacturer's recommendations.
- Do not leave brake fluid out in the open. Brake fluid is hygroscopic which means it will absorb humidity out of the air. The existence of water in brake fluid will decrease its boiling point and may cause a total malfunction of your brake system.
- Always use new and unused brake fluid; used and worn out brake fluid may cause a total malfunction of your brake system.
